

MAN 51/60

This highly efficient and robust liquid fuel engine offers excellent dynamic values and adapts easily to different output requirements. Its low specific fuel oil consumption significantly reduces operational expenditure.

Designed for easy conversion to dual fuel or gas operation, the MAN 51/60 offers a perfect solution for power plants that run initially on liquid fuel but are being prepared for gas operation in the future.

Benefits at a glance

- Easy retrofitting for dual fuel and gas operation
- High efficiency
- Variable power output settings
- Long time between overhauls

Engine features

General data

- Engine cycle: four-stroke
- No. of cylinders: 6L, 9L, 12V, 18V
- Bore: 510 mm/20.08 in
- Stroke: 600 mm/23.62 in

Fuel efficiency comparison

Engine automation and control

- MAN SaCoS_{one} safety and control system on engine, developed in-house at MAN

Turbocharging system

- Highly efficient constant pressure
- MAN TCA series exhaust gas turbocharging system
- Individual engine/turbocharger optimization matching

Starting system

- Starting air valves inside cylinder head

Fuel system

- Low fuel pressure at engine inlet 5 bar(g)/ 72,5189 psi
- Robust conventional injection system

Applications

- High efficiency base-load power plants
- Installations that are to be operated with gas at a later date
- Areas with no gas infrastructure
